08/2023 – en la actualidad  
Barquisimeto, Venezuela

### Developer ByC Computación

Development of a Help Center in BcY Computación, where through a web application dynamic Help Centers can be created depending on the user's needs.

Development of a Support Center app where users can manage tasks and assistance, aimed especially at the Call Center, allowing for orderly and efficient management of coordination with attendees, allowing the generation of attendee performance reports along with the number of assistance attended, In addition to providing flexibility when creating a user, it shows granting specific permissions to each user depending on the needs of the coordinator.

Development of an access records app, this app aims to keep exhaustive control of attendance in a company, school or gym, with the aim of generating reports of attendance, punctuality or regularity of users or employees, this can be done through the DNI number, unique QR code per user or through a desktop app that allows connection with a Digital Persona biometric device which connects to the web application through a unique token per service.

Development of a digital ID app, this app allows the user to personalize a ID with styles and designs quickly and efficiently, in addition to allowing the personalization of social networks of the company or school, idioms
